# Registration Form with Validation

**You are tasked with creating a registration form for a new web application. The form should have the following fields: username, email, password, and confirm password.**

- The form should validate that:
- The username is not empty and is at least 3 characters long.
- The email field contains a valid email address.
- The password is at least 8 characters long.
- The confirm password field matches the password field.

## **Task:**

- Implement the registration form using Flask-WTF.
- Ensure that the form includes CSRF protection.
- Write validation rules to enforce the above constraints.
- Display appropriate error messages if the validation fails.
